Hard skills

Languages:

Python, SQL, DAX

Data Engineering:

Fabric, Kafka, Spark, Airflow,
ETL/ELT Pipelines

Business Intelligence:

Power BI, DAX, Power Query,
Power BI Service, Excel

Databases:

SQL Server, PostgreSQL,
MySQL, MariaDB

Cloud & Infrastructure:

Google Cloud BigQuery,
Microsoft Power Platform,
Microsoft Fabric, Dataflows,
Docker, Docker Compose

Data Processing:

pandas, PySpark, Power Query

Version Control:

Git, GitHub

Language

Lithuanian - native
English - fluent

Jokūbas Griežė

Junior Data Engineer | Data Analyst

Professional Summary

Data Science and Engineering student at Kaunas University of Technology and Microsoft Certified Fabric Data Engineer Associate (DP-700). Currently working as a Data Engineer in a stealth startup, with hands-on experience in data engineering, business intelligence and analytics. Previously completed a Data Analyst internship at Prodivi, working with SQL, Power BI, DAX and data modeling. Interested in data engineering, analytics and data warehousing.

Education and courses

2023 - To date

Kaunas University of Technology

Bachelor's in Data Science and Engineering

Coursework focused on data engineering, databases, statistical analysis, and machine learning. Worked with Python and SQL for data processing and analysis.

2026 August

Microsoft Learn

Microsoft Certified: Fabric Data Engineer Associate

DP-700 certification covering data engineering in Microsoft Fabric, including data ingestion, transformation, orchestration, and monitoring.

2026 August

Microsoft Learn

Microsoft Applied Skills: Implement a Real-Time Intelligence solution with Microsoft Fabric

Hands-on credential focused on building and analyzing real-time data solutions in Microsoft Fabric.

Experience

July 2026 – To date Data Engineer Stealth Startup

- Developing a **synthetic data** platform that preserves dataset structure and statistical relationships.
- Building **data ingestion, profiling** and **transformation** pipelines for structured data.
- Designing **schema inference** and **semantic column classification** logic.
- Implementing privacy safeguards and data quality validation for BI, AI and testing use cases.

May 2026 – July 2026 Intern Data Analyst PRODIVI, UAB

- Worked on **SQL and Power BI**-based business intelligence solutions for client reporting projects.
- Designed **database** structures with **ETL** logic.
- Fixed **database and DWH structures, data models, relationships** and reporting logic.
- Supported improvements to **Power BI** report models
- Communicated** with clients to clarify reporting requirements and data-related questions.

Projects

AVAX Streaming Data Pipeline

Built a real-time data pipeline for crypto trades using Kafka, Spark and Airflow, with analytics data loaded into BigQuery. [View on Github](#)

News Ingestion Search Pipeline

Built an end-to-end data pipeline for automated news ingestion, ETL processing and semantic search with scalable batch processing. [View on Github](#)

NYC FHV Trips Power BI Dashboard [View on Github](#)

MusicGen text to audio generation [View on Github](#)

Tools:

- Python
- Apache Kafka, Spark, Airflow
- Google BigQuery
- Python
- Docker,
- Scrapy (web crawler),
- PyMySQL
- Power BI
- Machine learning
